Create Picture Slides

Instead of using textual answers in the answer region, you can use pictures. This is useful if you pose a question with visual responses or where a visual aid will help the audience choose.

**Step by Step Instructions**

1. Create a TurningPoint slide. It is recommended that you use descriptive words or phrases for the answer text in the answer region because this text will still be used for the chart labels, even though the text in the answer region will be replaced by pictures.

2. Insert pictures to use as answers using the options in PowerPoint’s Insert > Picture menu. Insert one picture for each answer. Find more information on inserting pictures in PowerPoint’s online help.

3. Resize and arrange the pictures the way you want them to appear on the slide. Select and drag the picture to reposition it. Select one of the side or corner handles and drag to resize the picture. Find more information in PowerPoint’s online help.

**Note** Since you’ll be using pictures as answers, the horizontal and offset charts will not align correctly with the answers. Use a vertical, 3D pie, distributed pie, or doughnut chart.
4. To order the pictures correctly with the answers, follow these steps:

a. First, ensure that no objects on the slide are selected by clicking outside the slide.

b. Select the picture that corresponds to the first answer by clicking on it. You can tell that the picture is selected when the resize handles are shown on its sides and corners.

c. Select the picture that corresponds to the second answer by holding the Control key on your keyboard and clicking on the picture. Now both the first and second picture are selected.

d. Repeat step c for each additional picture until you have selected one for each answer.

Note: You may include pictures on your slide that are not associated with one of the answers (for decoration or illustration). Do not select these pictures.

5. Select the Convert to Picture Slide button from the TurningPoint toolbar. (Hint: It’s the one that looks like an artist’s palette.)
When you select the Convert to Picture Slide button, the answer region is hidden and the pictures are enumerated with a label, according to the answers you assigned them.

After you convert the answers to pictures, you can still resize and arrange the pictures if you need to adjust them. Additionally, you can identify a correct answer or set point values.
